Order from SLA $1.60 63-14104

Trans. of Papier-Fabrikant (Germany) 1931 [v. 29] no. 30, p. 485-490.

DESCRIPTORS: *Lignin, Paper, Wood pulp, Chemical analysis, Hardness, Hydrolysis.

A rapid method is described for the determination of lignin in pulps which can be carried out with the simplest accessories. The method relies on the use of the so-called powdered material, a dust-fine material produced by a specially constructed grinder. Saccharification of the carbohydrate material is brought about by a new method with 78% sulfuric acid in the (over)

DESCRIPTORS: *Lignin, *Wood pulp, Chemical analysis, Paper industry.

It is shown by experimental examples that the resin, which is precipitated at the same time, increases the lignin determination. Several ways are shown of obtaining a resin-free lignin which provides an improvement in the general method. A new routine of operation is given which makes it possible to analyze bleached pulps with exceptionally low lignin contents. (Author) (See also 63-14104)

SMOOTHNESS AND POROSITY OF PAPER. [1961] 12p
Order from SLA $1.60 61-10452

Trans. of [de] Papierwereld (Netherlands) 1960, v. 14, no. 11, p. 619-624; I[nstitute of] P[aper] C[hemistry]. A[bstract] B[ulletin (U. S.) 1960?] v. 31, p. 241.

DESCRIPTORS: *Paper, Porosity, Surface properties, Test equipment.

A new instrument is described that simultaneously measures smoothness and porosity. It consists of a rectangular slit filled with liquid which is moved across the paper in a definite manner. During this motion the irregularities in the surface are filled and a certain amount of liquid penetrates. With the instrument, the portions of liquid taken up by the paper because of roughness and because of penetration can be distinguished.

A close correlation is established between the size of chips, the fibres produced therefrom, and the average fibre-length. This correlation is expressed in an easily managed mathematical formula. By means of this, not only the detrimental degree of chipping, but the original fibre-length of the plant can be calculated for the purpose of fibre measurements.

In some fields of perfume chemistry it is possible to set up by analogy inference rules governing the presumable odour of chemically related compounds; such rules allow an approximated prediction of an odour. There are series of chemically similar compounds where only part of the whole complex "odour" is changed from one member to the next. Groups having a rather characteristic scent can even impart this specific scent to a bigger
